Diflunisal	Ketoprofen	Phenaphen	Warfarin
Diclofenac	Ketorolac	Piroxicam	Zorprin

This list includes many — but not every — medication or herb that contains aspirin, NSAIDs or other ingredients that may “thin the blood,” a term which means that they interfere with blood clotting. Please carefully read product labels before taking any medication, or call your local pharmacy.

Tylenol is acetaminophen, which is not an NSAID, does not contain aspirin, and does not interfere with blood clotting. It is safe to take before or after your procedure.

Do not stop taking any prescription medication without first consulting the prescribing physician.
